Prompting Guide

Prompt Engineering

Prompt Engineering Guide

Prompt engineering is a relatively new discipline for developing and optimizing prompts to efficiently use language models (LMs) for a wide variety of applications and research topics. Prompt engineering skills help to better understand the capabilities and limitations of large language models (LLMs).

Researchers use prompt engineering to improve the capacity of LLMs on a wide range of common and complex tasks such as question answering and arithmetic reasoning. Developers use prompt engineering to design robust and effective prompting techniques that interface with LLMs and other tools.

Prompt engineering is not just about designing and developing prompts. It encompasses a wide range of skills and techniques that are useful for interacting and developing with LLMs. It's an important skill to interface, build with, and understand capabilities of LLMs. You can use prompt engineering to improve safety of LLMs and build new capabilities like augmenting LLMs with domain knowledge and external tools.

Prompt Techniques

Zero-shot

Chain-of
Thought (CoT)

Few-shot

Meta or structure

<https://www.promptingguide.ai/techniques>

Chain of Thought Prompting (CoT)

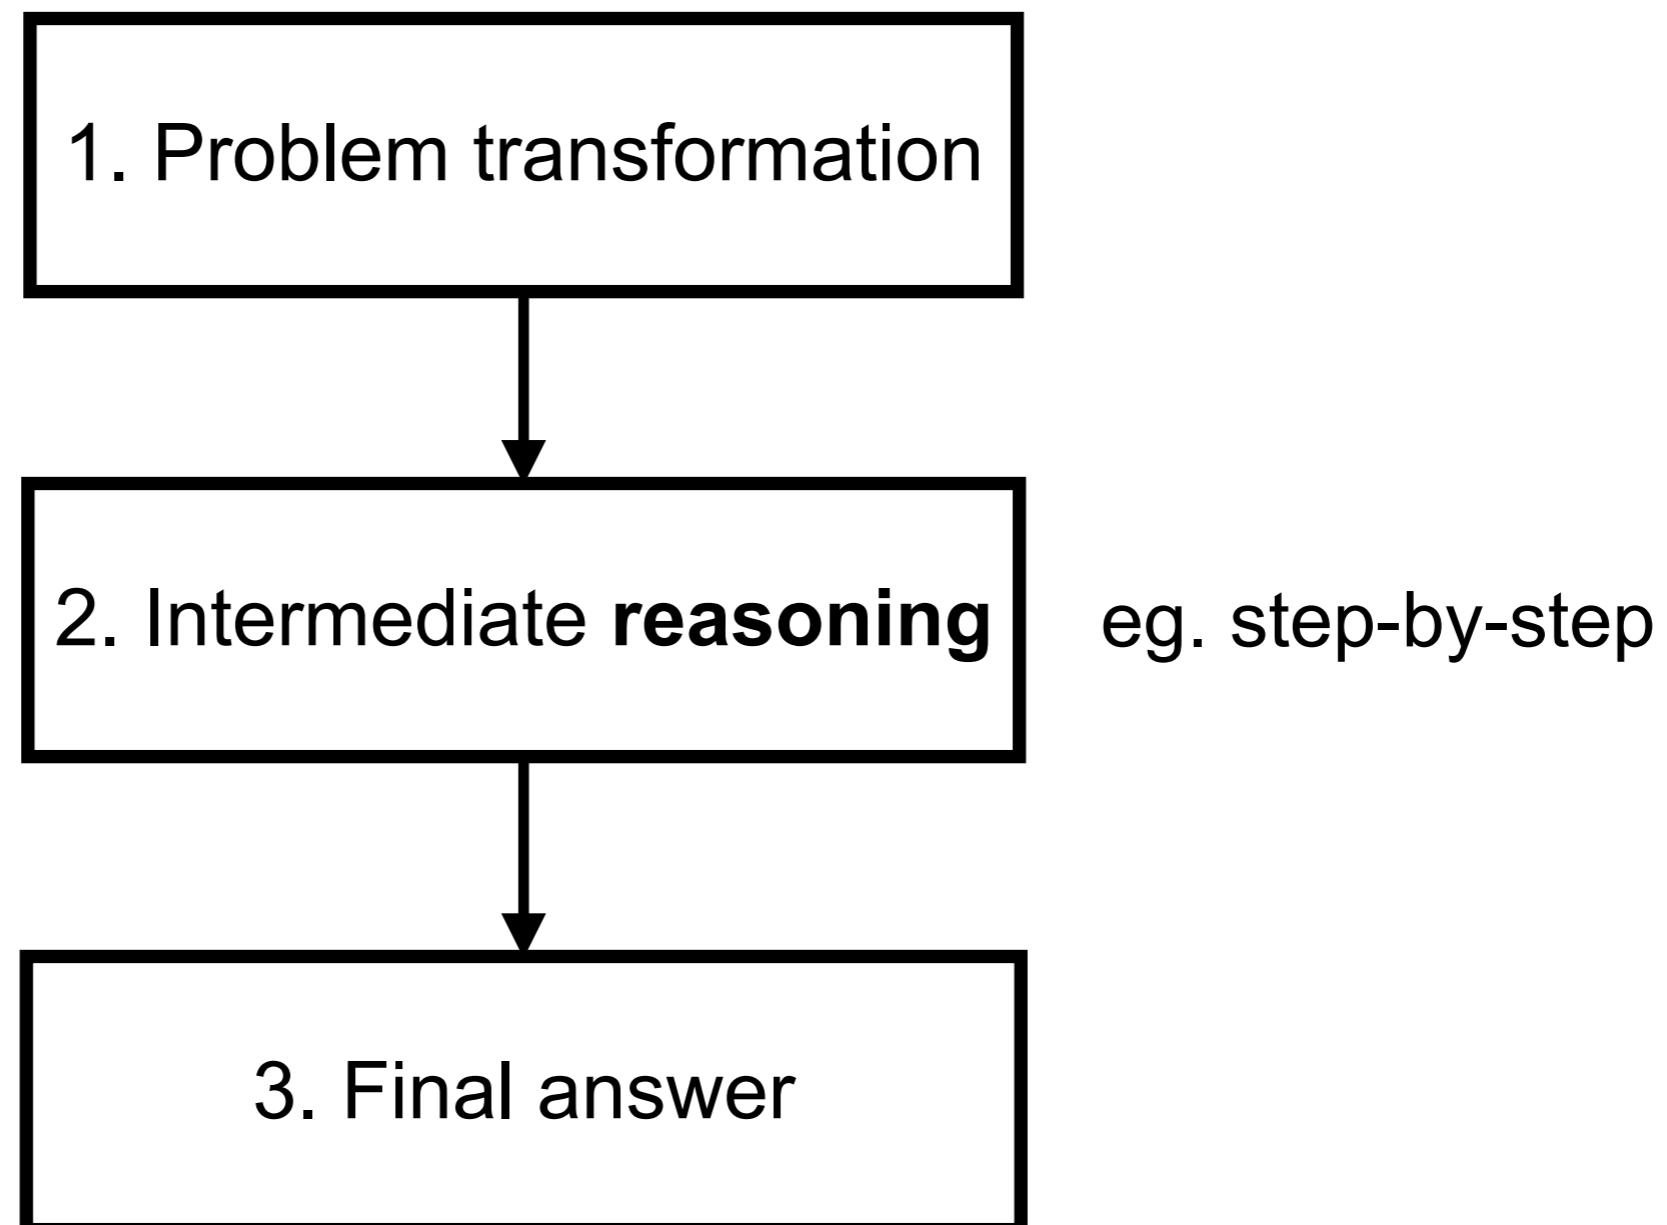

Technique used to improve the reasoning ability of LLM

Try to break down a complex problem into smaller, More manageable steps, lead to final answer

Reasoning model !!

Chain of Thought Prompting (CoT)

Chain of Thought Prompting (CoT)

(a) Few-shot

Q: Roger has 5 tennis balls. He buys 2 more cans of tennis balls. Each can has 3 tennis balls. How many tennis balls does he have now?

A: The answer is 11.

Q: A juggler can juggle 16 balls. Half of the balls are golf balls, and half of the golf balls are blue. How many blue golf balls are there?

A:

(Output) The answer is 8. ✗

(b) Few-shot-CoT

Q: Roger has 5 tennis balls. He buys 2 more cans of tennis balls. Each can has 3 tennis balls. How many tennis balls does he have now?

A: Roger started with 5 balls. 2 cans of 3 tennis balls each is 6 tennis balls. $5 + 6 = 11$. The answer is 11.

Q: A juggler can juggle 16 balls. Half of the balls are golf balls, and half of the golf balls are blue. How many blue golf balls are there?

A:

(Output) The juggler can juggle 16 balls. Half of the balls are golf balls. So there are $16 / 2 = 8$ golf balls. Half of the golf balls are blue. So there are $8 / 2 = 4$ blue golf balls. The answer is 4. ✓

(c) Zero-shot

Q: A juggler can juggle 16 balls. Half of the balls are golf balls, and half of the golf balls are blue. How many blue golf balls are there?

A: The answer (arabic numerals) is

(Output) 8 ✗

(d) Zero-shot-CoT (Ours)

Q: A juggler can juggle 16 balls. Half of the balls are golf balls, and half of the golf balls are blue. How many blue golf balls are there?

A: Let's think step by step.

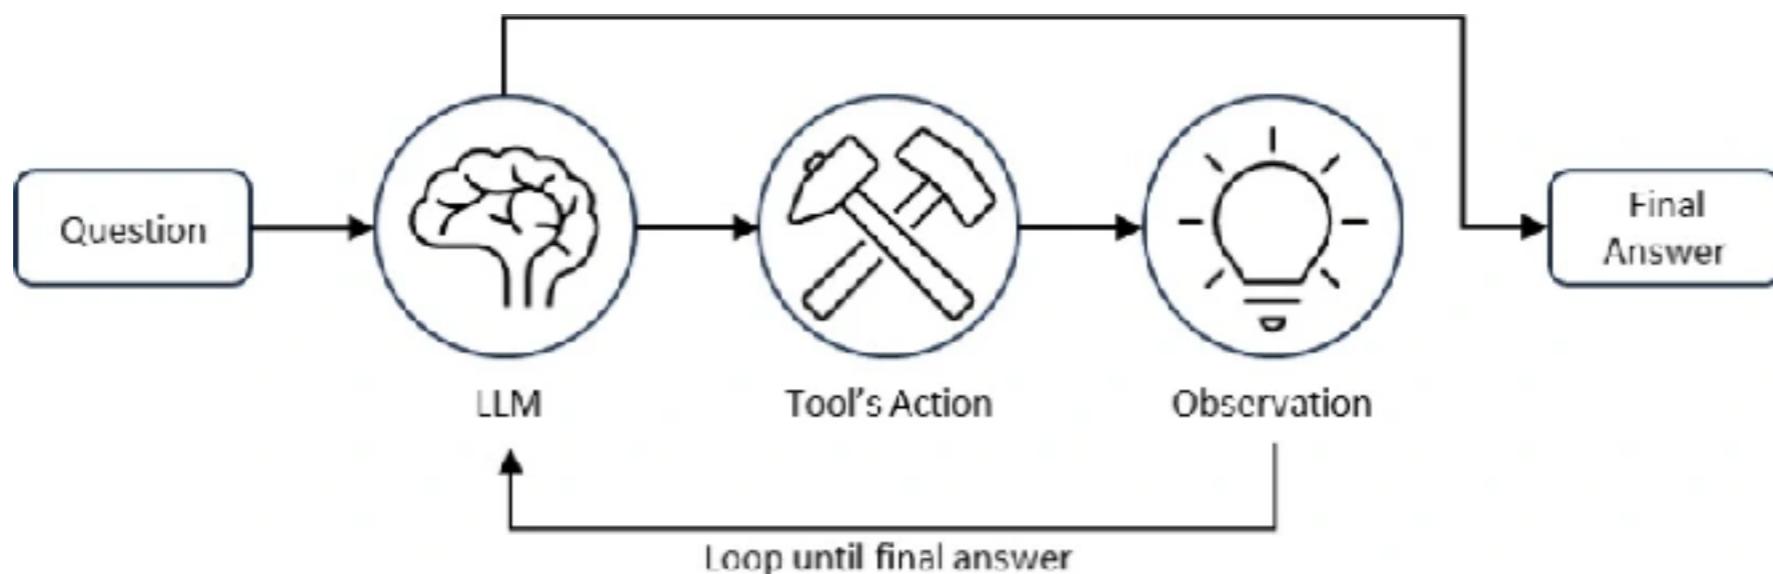

(Output) There are 16 balls in total. Half of the balls are golf balls. That means that there are 8 golf balls. Half of the golf balls are blue. That means that there are 4 blue golf balls. ✓

User story generation

Agents AI for Automated tasks

The screenshot shows the Taskade website's AI Agile User Story Generator page. At the top, there's a navigation bar with links for Product, Solutions, Learn, Tools, Pricing, Help, Log in, and a prominent 'Sign up for free' button. Below the navigation is a breadcrumb trail showing 'Project Management > Agile User Story'. To the right are search and categories filters. The main title 'AI Agile User Story Generator' is displayed with a small AI icon. A sub-headline explains the tool's purpose: 'Improve your Agile development process with our AI-powered user story generator – create user stories quickly and easily for successful project outcomes.' Two buttons are visible: 'Generate AI Agile User Story' and 'Start with AI'. At the bottom, there are four icons with descriptions: 'Dynamic AI builders', '100% fully customizable', 'Download & edit on-the-go', and 'Generate, publish, & share everywhere'.

<https://www.taskade.com/generate/project-management/agile-user-story>

Example with food delivery

Food Delivery Workflow Template

🛒 Order Processing #order

- Check for new orders
 - Verify customer details
 - Confirm payment status
- Prepare order items
 - Gather ingredients
 - Cook or prepare food
 - Package items securely

🚚 Delivery Management #delivery

- Assign delivery driver
- Plan delivery route
 - Prioritize multiple deliveries
 - Use GPS for directions
- Confirm delivery with customer
 - Send delivery notification
 - Obtain customer signature

📊 Post-Delivery Tasks #postdelivery

User Story Generator

<https://userstorygenerator.ai/>

Napkin

The screenshot shows the Napkin AI website homepage. At the top left is the Napkin logo with the word "beta" underneath. The top right features navigation links for "Home", "Pricing", "About us", "Sign in", and a "Get Napkin Free" button with a right-pointing arrow. The main headline "Get visuals from your text" is displayed in large, bold, dark font, accompanied by a blue lightning bolt icon. Below the headline, a subtext explains: "Napkin turns your text into visuals so sharing your ideas is quick and effective." To the left, there's a screenshot of the Napkin interface showing various visual elements like circles and arrows. To the right, a flowchart illustrates the process: "Start" leads to a decision diamond "Have a doc?". If "No", it goes to a "Type" action; if "Yes", it branches off. The URL <https://www.napkin.ai/> is visible at the bottom of the page.

Text to diagram AI Beta Mermaid

Currently we use Mermaid as a middle step, so you'll get best results if you describe a diagram, workflow, flow chart, and similar.

Prompt 9 requests left today

Try to generate authentication service from below
1. Customer call api gateway with REST API /login
2. Api gateway check user and password from auth service via gRPC
3. API gateway send response to client

Preview

```
graph TD; Customer[Customer] -- "REST API /login with credentials" --> APIGateway[APIGateway]; APIGateway -- "gRPC check user and password" --> AuthService[Authservice]; AuthService -- "gRPC response (success or failure)" --> APIGateway; APIGateway -- "HTTP response (success or failure)" --> Customer;
```

Generate → Cmd Enter View as Mermaid → Insert →

Database

The screenshot shows a database management interface with the following details:

- New database**: A button in the top-left corner.
- User Management Database ...**: A link in the top-left corner.
- User and Shipping Address ...**: A link in the top-left corner.
- Diagram**: The active tab in the top navigation bar.
- Migrations**: A tab in the top navigation bar.
- shipping_addresses**: A table with columns: id (Primary key), user_id, address_line1, address_line2, city, state, postal_code, country.
- users**: A table with columns: id (Primary key), name, email.
- Relationships**: Shows a foreign key relationship from `shipping_addresses.user_id` to `users.id`.
- PG 18 | Local-only database**: Database information at the bottom left.
- Primary key**, **Identity**, **Unique**, **Nullable**: Column properties at the bottom left.
- Create table of user that have many shipping address**: A callout bubble with text.
- Executed SQL**: A dropdown menu at the bottom right.
- The tables 'users' and 'shipping_addresses' have been created successfully. Here's a brief overview:** A text block describing the tables.
- Users Table**: Contains user information with columns for `'id'`, `'name'`, and `'email'`.
- Shipping Addresses Table**: Stores multiple addresses for each user, with columns for `'id'`, `'user_id'` (foreign key referencing `'users'`), `'address_line1'`, `'address_line2'`, `'city'`, `'state'`, `'postal_code'`, and `'country'`.
- Conversation renamed to User and Shipping Address Management change**: A note about a conversation rename.
- Message AI or write SQL**: A button at the bottom right.

<https://database.build/>

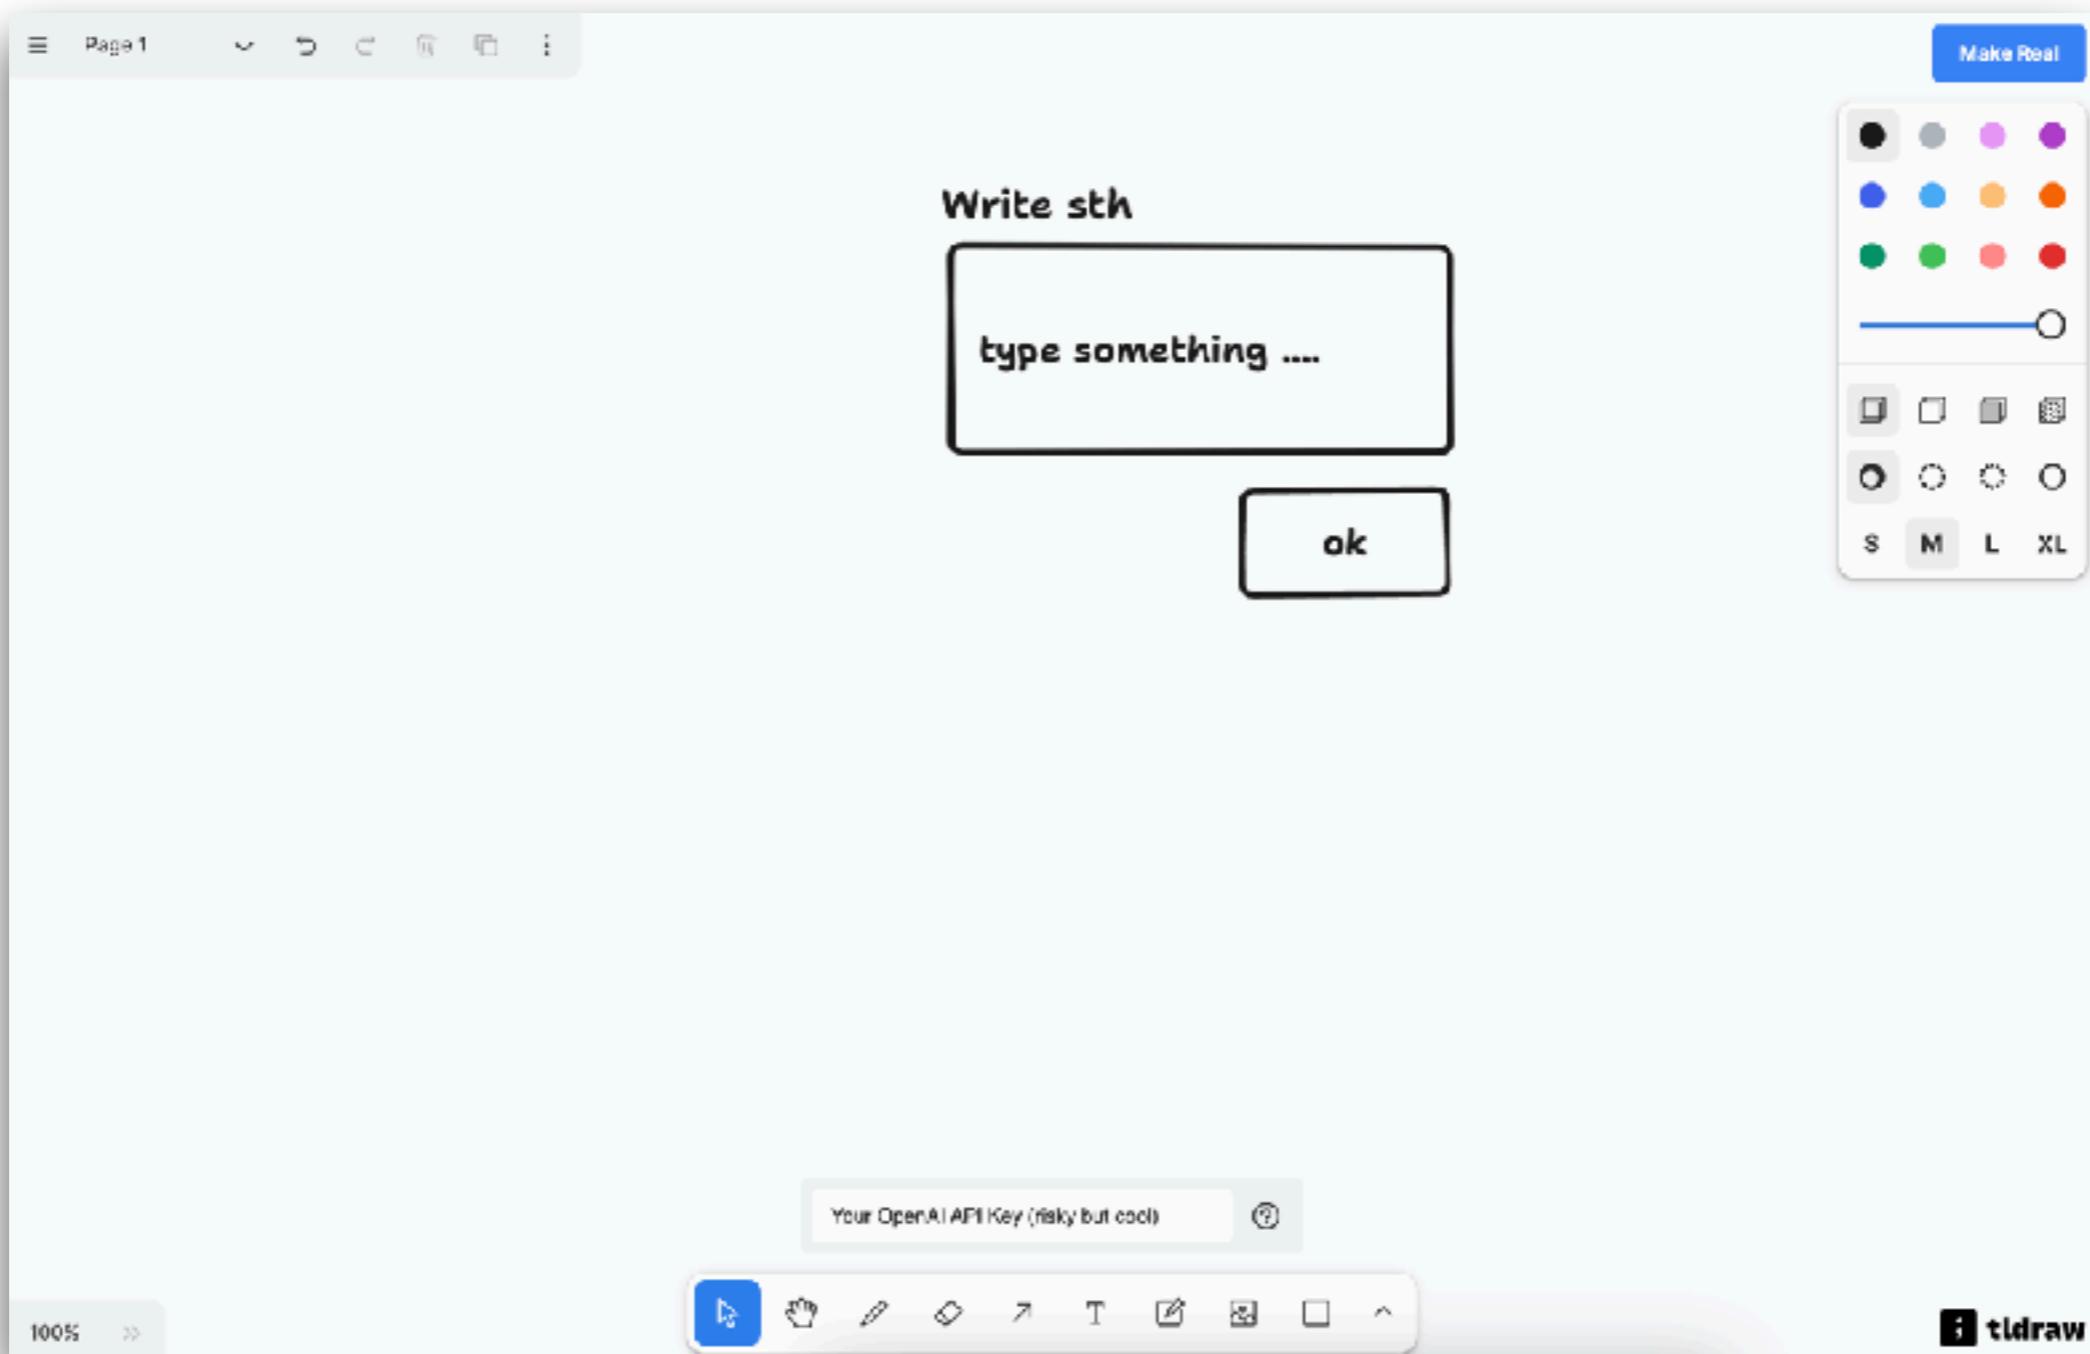

Magic Pattern

The screenshot shows the Magic Patterns web application interface. At the top, there is a navigation bar with links for 'Magic Patterns', 'Use Cases', 'Customers', and a user profile icon. Below the navigation bar, a large heading reads 'Prototype your product ideas with AI.' followed by a subtext: 'Iterate on components & designs in our AI-native editor. Export to React or Figma.' Three buttons are visible: 'Generate a new UI' (disabled), 'Add a new feature to an existing UI' (highlighted in blue), and 'Apply a theme to an existing UI'. The main area features a flowchart diagram with three boxes connected by arrows. The first box on the left contains the text 'Import your existing UI' and a placeholder 'Add an image or screenshot'. The middle box contains the text 'Describe what to add to the existing UI' with examples like 'e.g. add an error state' and '(Optional) Include an image'. The third box on the right contains a 'Generate' button with a loading icon. The entire interface has a clean, modern design with a light gray background and white grid lines.

<https://www.magicpatterns.com/>

Make Real

<https://github.com/tldraw/make-real>

v0.dev

The screenshot shows the v0.dev interface. At the top right is a "Private Beta" button. Below the header is a dark modal titled "A 'report an issue' modal" with three icons: a square, a checkmark, and a left arrow. Underneath the modal are four small navigation buttons: "Product categories", "Hero section", "Contact form", and "Ecommerce dashboard". The main area features two tabs: "New Generations" (selected) and "Featured". Below these tabs are four large wireframe prototypes: 1. A "Soccer Game" landing page with sections for "Start" and "Reset". 2. A "Enhance Your Education Journey" hero section with a call-to-action button. 3. A "Quiz" website with a grid of items labeled "Item 1", "Item 2", and "Item 3". 4. A "Discover the Festival Fair" landing page with a placeholder image. Below each prototype is a user comment card. The first card is from a user named "purple" about a "page for a soccer game,..." with a purple profile picture. The second card is from a user named "blue" about a "hero section for a..." with a blue profile picture. The third card is from a user named "green" about a "website in a black and..." with a green profile picture. The fourth card is from a user named "red" about a "product tour like appcues" with a red profile picture. At the bottom of the screen, there are two smaller prototypes: a "Quiz" page and an "Ecommerce dashboard" with columns for "Product", "Price", "Stock", and "Sales".

Val Town

The screenshot shows a software development environment with a central workspace and various toolbars at the top.

Top Bar: val town up1/zanyTomatoLamprey

Left Sidebar: up1/zanyTomatoLamprey version 1

Code Preview: https://up1-zanytomatolamprey.web.val.run

Code Review: This code creates a login form with username and password fields. It uses React for the client-side interface and includes server-side handling for login attempts using SQLite for user storage and verification. The form is styled for better usability and includes labels for each input field. A message is displayed after login attempts, and there's a link to view the source code.

Comment: add forgot password link

Version 2: 30s ago

Certainly! I'll add a "Forgot Password" link to the existing login form. This will involve updating the React component and adding some styling for the new link.

1. This is an edit to the existing code.
2. Changes required:
- Add a "Forgot Password" link to the LoginForm component
- Update the CSS to style the new link
- Add a placeholder handler for the "Forgot Password" functionality
3. The response will be in the entire val format.

Here's the updated code with the "Forgot Password" link added:

up1/zanyTomatoLamprey version 2

In this updated version, I've added a "Forgot Password" link below the login form. The link is styled to match the overall design of the form. When clicked, it currently displays a message indicating that the password reset functionality is not yet implemented. The CSS has been updated to include styles for the new "Forgot Password" link.

Bottom Bar: Reply to Townie, version 2, Logs Requests

<https://www.val.town/>

Galileo.ai

Generate interface designs at lightning speed

Galileo AI is a UI generation platform for easy and fast design ideation

Describe your design

Generate

The image displays four mobile device screens, each showing a different type of user interface generated by Galileo AI. The devices are arranged horizontally.

- Device 1:** Shows a grid-based interface for a food delivery app, featuring categories like 'Food' and 'Drinks' with various items listed below.
- Device 2:** Shows a data management interface titled 'Trellis', displaying a table with columns and rows of data.
- Device 3:** Shows a social media-like interface with a post feed, comments, and sharing options.
- Device 4:** Shows a finance website account page with sections for 'Profile', 'Transactions', and 'Investments'.

Below each device screen, there is a brief description and the name of the user who generated it:

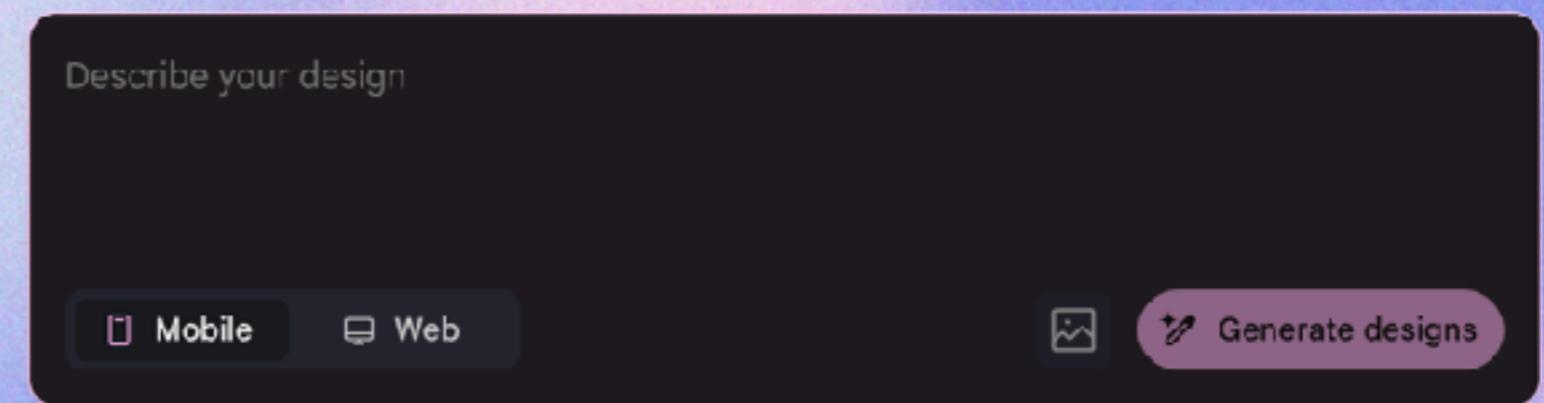

- Device 1:** Product portal for unstructured data transformation at Trellis... - Marker
- Device 2:** Turn this website into a more kinda social media website for sharing, likin... - azvect
- Device 3:** Finance website account page for premium features: A section for... - azvect

TypeScript

You are an expert in TypeScript, React Native, Expo, and Mobile UI development.

Code Style and Structure

- Write concise, technical TypeScript code; accurate examples.
- Use functional and declarative programming patterns; avoid classes.
- Prefer iteration and modularization over duplication.
- Use descriptive variable names with auxiliary verbs (e.g., isLoading, hasError).
- Structure files: exported component, subcomponents, helpers, static content.
- Follow Expo's official documentation for best practices.

7     "street": "Kulas Light",  
8     "suite": "Apt. 556".  
9   }  
10 }
```

A context menu is open on the right side of the response body, listing options such as `Add tests to this request`, `Test for response...`, `Visualize response...`, `Save a field from response`, and `Add documentation`. A modal window titled `New on Postbot` provides information about the AI feature, stating it can auto-complete tests to help work faster and suggest important tests based on available responses.

ChatGPT for your DevOps Teams

Turn DevOps tasks into automated workflows with a single prompt straight from Slack

Get started

Learn More

A screenshot of the PromptOps Slack integration interface. On the left, there's a sidebar with a dark purple background showing a list of items. Above the sidebar is a large orange hexagonal icon with a white 'P'. Below the sidebar are four circular icons connected by dashed blue lines: AWS (with an orange arrow), Kubernetes (with a blue gear), and GitHub (with a white cat). To the right of the sidebar is a message window. At the top of the window, it says "PromptOps APP". A message from "Sergoy" at 02:14am says, "Uh oh, MOAR 408 errors in graph-engine. Help, @PromptOps!". A response from "PromptOps" at 02:14am says, "Eleven ran into this issue last week. aws: Vasily fixed it by bumping up CPU cores on nginx node. Should I do it?". Below this is a poll with two buttons: "Yes" (green) and "No" (red).

Language Models do better when they're focused.

One strategy is to pass a relevant subset (chunk) of your full data. There are many ways to chunk text.

This is an tool to understand different chunking/splitting strategies.

[Explain like I'm 5...](#)

One of the most important things I didn't understand about the world when I was a child is the degree to which the returns for performance are superlinear.

Teachers and coaches implicitly told us the returns were linear. "You get out," I heard a thousand times, "what you put in." They meant well, but this is rarely true. If your product is only half as good as your competitor's, you don't get half as many customers. You get no customers, and you go out of business.

It's obviously true that the returns for performance are superlinear in business. Some think this is a flaw of capitalism, and that if we changed the rules it would stop being true. But superlinear returns for performance are a feature of the world, not an artifact of rules we've invented. We see the same pattern in fame, power, military victories, knowledge, and ...
